

Whats your name!

Lets learn the basics of Python! You are given the First name and the Last name of a person. Your task is to read them and print

```
Hello firstname lastname! You just delved into python.
```

Its that simple!

Input Format

The first line contains the First Name
The second line contains the Second Name

Output Format

Print the output as mentioned above.

Sample Input

```
Guido  
Rossum
```

Sample Output

```
Hello Guido Rossum! You just delved into python.
```

Concept

The input read by the program is stored as a string data type. A string is a collection of characters.

Note

Don't forget to trim the newlines while reading the first/last name!
